

Skills

- Full-Stack Development
- AI/ML
- Blockchain Development
- TypeScript
- Supabase
- API Design
- UI/UX Implementation
- Code Architecture
- Project Management
- Deployment
- Production Readiness
- Smart Contracts
- C++
- Data Integration

Sajjil Akhtar

About

Passionate AI&ML student and Blockchain Developer, Sajjil Akhtar is actively exploring the endless possibilities of technology. With a focus on full-stack development and robust system architecture, Sajjil builds innovative solutions across various domains, showcasing expertise in both cutting-edge AI integration and distributed ledger technologies.

Experience

Lead Full-Stack Developer - FreshTerra E-commerce Platform (Personal Project)

- Developed and launched the initial e-commerce storefront for FreshTerra, establishing core user interaction flows.
- Engineered the robust backend infrastructure and comprehensive admin dashboard, empowering full operational control over the platform.
- Achieved production readiness for a Supabase launch, optimizing backend for Supabase-only data storage.
- Implemented critical administrative features including intuitive side panels, product management (deletion, editing), and robust order fallback mechanisms.
- Enhanced maintainability through strategic component decomposition and adherence to clean code principles.
- Utilized Supabase for database integration and backend services, ensuring scalable and reliable data management.
- Applied full-stack development expertise to orchestrate both front-end (storefront and admin UI) and backend logic.
- Practiced phased development and project management to deliver complex features systematically.

Projects

- **MerkleNode Portfolio/CMS**, Lead Developer , Developed a personal portfolio and content management system (CMS) to showcase projects and expertise., Refactored codebase, implemented UI primitives, and configured navigation for improved user experience., Streamlined deployment processes by configuring Vercel builds and optimizing CI workflows.
Technologies: TypeScript
- **Agent-s: Model Context Protocol (MCP) Prototype**, Lead Developer , Designed and implemented the Model Context Protocol (MCP) prototype to connect AI-powered applications with diverse data sources., Enabled integration with APIs and blockchain-based smart contracts for enhanced data interaction., Developed an open and extensible protocol to facilitate AI application connectivity.
Technologies: AI, Blockchain, Smart Contracts, API Integration
- **Entropy Engine**, Developer , Developed a TypeScript-based project for [inferred purpose, e.g., randomness generation or data processing].
Technologies: TypeScript
- **Simple Blockchain Prototype**, Developer , Implemented a foundational blockchain prototype to understand core distributed ledger concepts.
Technologies: C++, Blockchain

- 
- **Cryptocurrency System**, Developer , Developed a basic cryptocurrency system, exploring transaction management and ledger integrity.
Technologies: C++, Blockchain
 - **Proof-of-Work Simulator**, Developer , Created a simulator for Proof-of-Work (PoW) consensus mechanisms to analyze mining processes.
Technologies: C++, Blockchain
 - **Multithreaded Block Mining**, Developer , Implemented a multithreaded block mining application to optimize computational efficiency in blockchain networks.
Technologies: C++, Multithreading, Blockchain
 - **Blockchain PoW Project**, Developer , Executed a comprehensive blockchain project focusing on Proof-of-Work implementation and validation.
Technologies: C++, Blockchain
 - **File Organized Agent**, Developer , Developed an agent for efficient file organization and management.
 - **Personal Website**, Developer , Maintained and updated personal static website for online presence.
Technologies: HTML, CSS, JavaScript
